ABSTRACTED-PUB-NO: JP 04295428A

BASIC-ABSTRACT:

Antiallergic agent comprises hesperidin as an effective ingredient.
An
anti-inflammatory agent also comprises hesperidin as an effective
ingredient.

This substance is prepd. with additives to form tablets, capsules,
injections,
ointment, pap, lotion, etc..

USE/ADVANTAGE - Hesperidin is pharmaceutically useful for treatments
of
allergic diseases and inflammations. It can be orally administered
at 25-500
mg/day/an adult, and also parenterally administered at an appropriate

amt..

In an example, the effect of hesperidin against 48-hr. homologous PCA reaction was evaluated by orally administering hesperidin to rats, injecting anti-EWA rat serum at 0.05 ml/rat in 1 hr., intravenously administering blue saline contg. EWA (antigen) at 0.5 ml/rat in 48 hrs., bleeding them for 30 mins., and measuring the amt. of blue stain contained. For control, Na CMC soln. was administered. The result was that hesperidin inhibited the amt. of blue stain in a dose-related manner. Specifically, 36.8% inhibition was found for 0.1 mM/kg administration gp..
